# Localization

Equator

- ▶ **Localization in an empty environment?**
  - Requires some “stuff” around
  - Determine the physical position or logical location
- ▶ **Reference points (“landmarks”)**
  - Natural: Trees, mountains, river bend, earth’s surface, sun, stars, ...
  - Artificial: Road signs, Surveyor’s mark, Retro-reflector, buoys, lighthouse, radio beacon, ...
- ▶ **Coordinate systems**
  - Global coordinate frame, Earth coordinates
  - Local reference frame: Cartesian grid, floor tiles
  - Absolute or relative coordinates

# Localization

## Applications

- Surveying, geodesy
- Naval navigation, aviation, space flight
- Navigation of people inside buildings in urban areas
- Cars on roads, logistics
- Navigation of robots: Autonomous mobile units
- Industrial machines, tools: Drills, rivet hammers
- Networks: Routing algorithms, sensor networks
- ...and many more!

# Localization

## Parameter

- Centralized or distributed computing
- Availability of position information: Active vs. passive localization
- Application
  - Indoors, outdoors, global
- Sources of information: Sound, light, radio signal, magnetic field, ...

## Metrics

- accuracy
- precision
- other costs

# Sources of Information

- ▶ Neighborhood information
  - Range provides coarse location information
    - e.g. GSM / UMTS cell, wireless IDs
- ▶ Triangulation and trilateration
  - Angle differences
  - distance measurement
- ▶ Analysis of the environment
  - Characteristic "signature" by radio conditions in the environment
- ▶ Inertial navigation systems
  - Measurement of acceleration and rotation

# RSSI

## Received Signal Strength Indicator

- Using the path loss at a known transmission power
- Measurement of the received signal

$$P_{\text{recv}} = c \frac{P_{\text{tx}}}{d^\alpha} \Leftrightarrow d = \sqrt[\alpha]{\frac{c P_{\text{tx}}}{P_{\text{recv}}}}$$

$\alpha < 2$  : tunnels  
 $\alpha > 2$  : obstacles

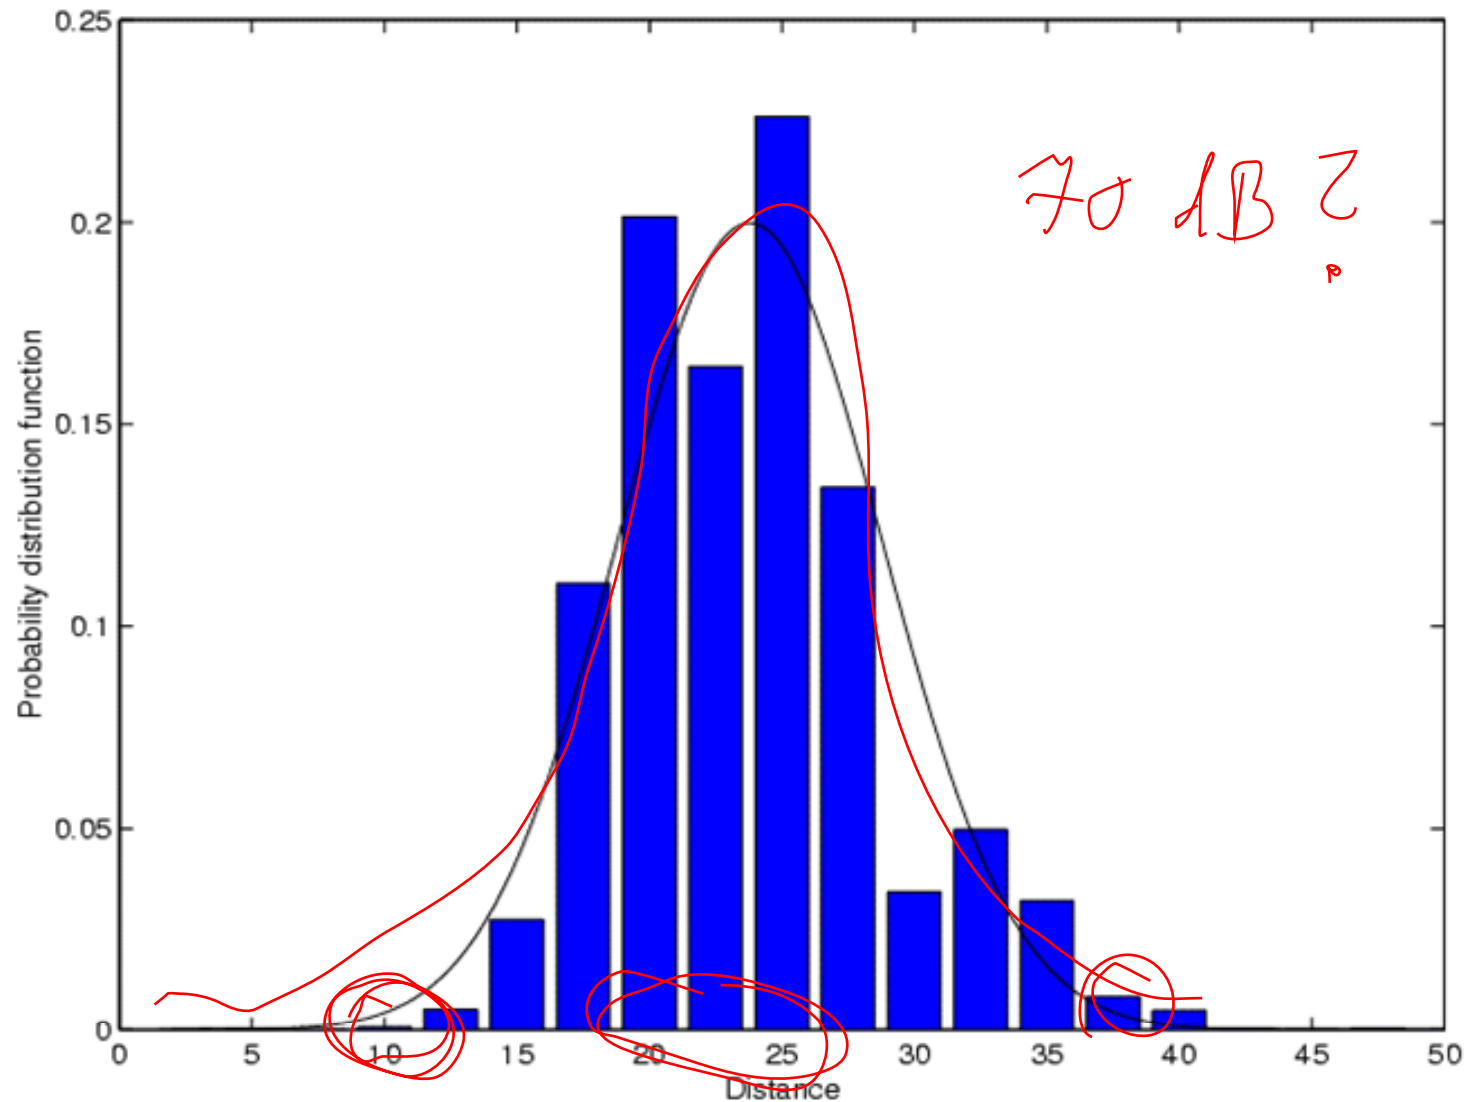

- Path loss exponent  $\alpha$ ,  
transmission power  $P_{\text{tx}}$
- Problem: High error rate

[Sichitiu and Ramadurai, MASS 2004]

# RSSI

- Problem: high error rate
  - Probability distribution for RSSI and given transmission power

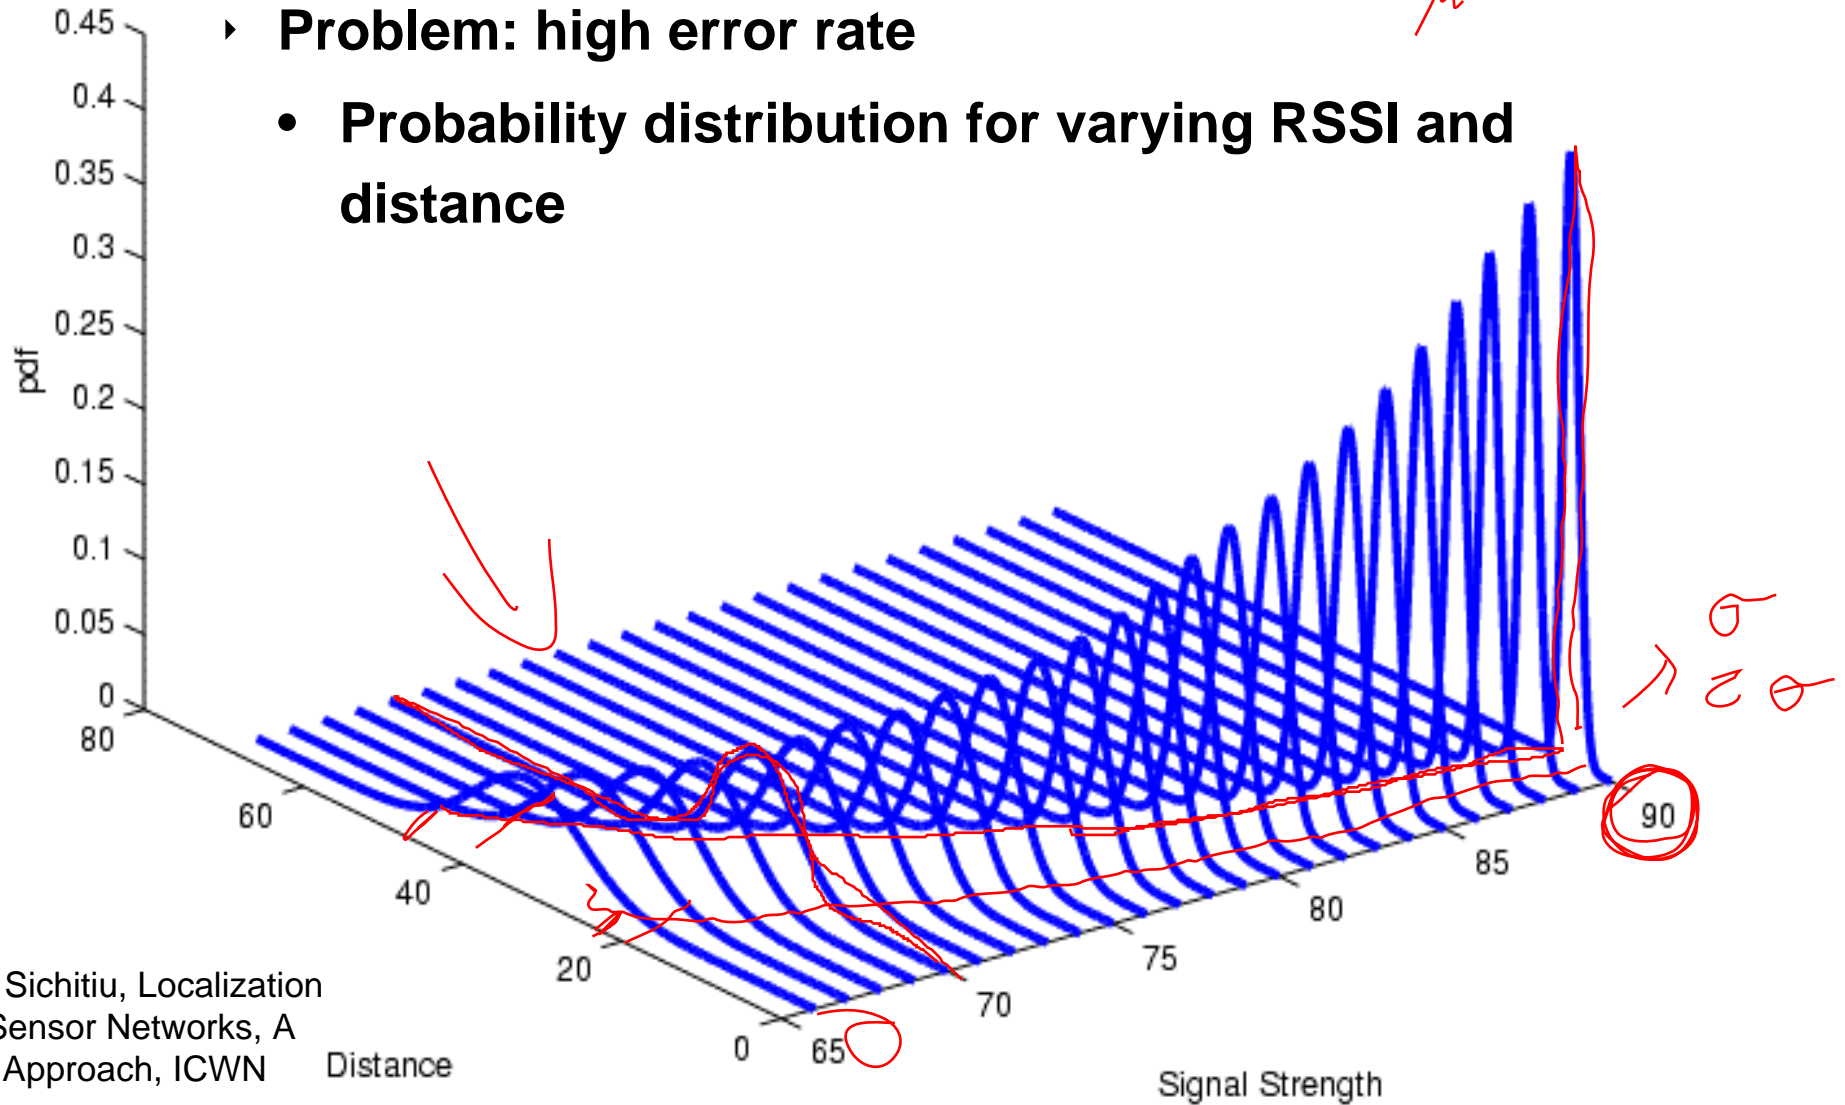

[Ramadurai, Sichitiu,  
Localization in Wireless  
Sensor Networks,  
A Probabilistic Approach,  
ICWN 2003]

# RSSI

- ▶ **Problem: high error rate**
  - **Probability distribution for varying RSSI and distance**

[Ramadurai, Sichitiu, Localization in Wireless Sensor Networks, A Probabilistic Approach, ICWN 2003]

# RSSI

- **Problem: high error rate**
  - **Probability distribution for varying RSSI and distance**

[Sichitiu and Ramadurai,  
MASS 2004]

$$\Delta t = \frac{d}{c}$$

# Time of Arrival

$$c = 300,000 \frac{\text{km}}{\text{s}}$$

$$d = 3 \text{ m}$$

$$\frac{3}{300,000,000} = \frac{1}{100,000,000} \text{ ms} = 0,01 \text{ ms}$$

## Time of arrival (TOA)

- Transmission time ("Time of flight") is measured
- Transmission time = Reception time - Send time
- Results from the quotient:
  - Transmission time = distance / speed signal

$$c_{\text{sound}} = 340 \frac{\text{m}}{\text{s}}$$

$$\text{rate} \approx 2000 \frac{\text{m}}{\text{s}}$$

## Problem

$$d = at + ae$$

- Positions of measurement points (anchors) must be known (usually...)
- Accurate time measurement
- Clock synchronization
- Relative ranges require more anchors

# Time Difference of Arrival (ToA)

- ▶ Two different signals with different transmission speeds

- E.g. ultrasound and radio signal, “thunderstorm”
- Main component of the speed of sound
- Calculate the different arrival times is distance
- If one signal is very fast (e.g. “light”), eliminate it

- ▶ Problems:

- calibration (hardware delay)
- special hardware is required

# Round Trip time (ToA)

- ▶ Two way communication, send a signal back and forth between two transceivers
  - E.g. radio signal, sound signal
  - Distance =  $1/2 * \text{Round trip time} / c$
- ▶ Problems:
  - Again: calibration (hardware delay)
  - Requires two transmitters and two receivers
- ▶ Similar: Measure distance to an obstacle (reflection)
  - Distance measurement by Laser or ultrasound
